THE STAFF OPERATING GUIDE

The café day, done properly

Cyclist Café · POS features & staff operating procedures

31 OCTOBER 2026 · TRAINER-LED & SELF-STUDY

Open → Use system → Hand over → Close day

Menu
Products, categories, combos

Stocks
Goods, ingredients, recipes, suppliers

Staff
Roster, tasks, leave, pay, documents

Events
Categories, RSVPs, attendance

Setup
Register, access, devices, configuration

START HERE

Your login and the drawer are separate

Signed-in employee

Your account identifies who operates the software and records an action.

Register cashier

The assigned cashier is responsible for physical cash in the open drawer.

Signing in does not open the register or replace its cashier.

START HERE

Follow the register day in four steps

01

Open

Count the opening cash and accept responsibility.

02

Use system

Record orders, kitchen work, payments and cash movements.

03

Hand over

Count again. The incoming cashier signs in and accepts.

04

Close day

Reconcile the drawer and create the closing record.

START HERE

Rules every staff member follows

01 Use your own account and check who owns the drawer.

02 Read the order back, including size, shots, milk and notes.

03 Record cash movements and differences honestly.

04 Check saved status before retrying a payment or order.

A printer problem is not a reason to collect payment again.

OPENING

Sign in as yourself

01 Enter your staff email and password. Complete verification if shown.

02 Check that Home shows your name and profile.

03 Read the register status before taking over the counter.

If login fails, ask an admin to check Staff → Login.

OPENING

Start with Home

Everyday staff

My day shows own sales, assigned tasks, today’s roster, stock alerts, birthdays and quick tips.

Admin overview

Home also shows collections, open bills, kitchen progress, seating, leave requests and operational follow-ups.

The register flow shows who is at the counter and what happens next.

OPENING

Check the counter before opening

- [ ] Sync saved orders on each terminal you will use.
- [ ] Check the roster, daily tasks and important handover notes.
- [ ] Check the printer, paper and selected connection.
- [ ] Review sold-out items, low stock and ingredients to check.

OPENING

Count first, then open the register

01 On Home or Setup → Shift, choose Open register.

02 Count the physical opening float and type that amount.

03 Acknowledge responsibility, submit and check the confirmed cashier name.

Use the counted amount, not a remembered or expected amount.

OPENING

The opening float is cash already in the drawer

Training example

₹1,000

Cash physically counted before service

₹0

Sales collected so far

Opening float is not a sale.

OPENING

Only the assigned cashier handles drawer cash

ACTION	WHO PERFORMS IT
Create orders / send KOTs	Authorized POS staff
Record non-cash payments	Authorized POS staff; verify receipt
Collect cash / split cash	Assigned register cashier
Cash in, safe drop, cash expenses	Assigned register cashier

ORDERS & PAYMENTS

Record each guest order once

01

Choose

Order type, table if dine-in, and customer when relevant.

02

Build

Products, quantities, options, notes and approved discounts.

03

Dispatch

Send the unsent items to kitchen.

04

Settle

Verify payment, mark paid and issue the correct bill.

ORDERS & PAYMENTS

Check the cart before sending

01 Search products and use categories or grid/list views.

02 Check quantities, prices, order type and dine-in table.

03 Attach the correct Customer, then review the total.

Adding a product returns the POS to the Cart bucket.

ORDERS & PAYMENTS

Read back the drink customisation

Choose the options

Size, single/double shot, milk, add-ons and quantities.

Read the preparation notes

Use a clear guest instruction and check it on the cart line.

A double shot or a milk change can affect both price and ingredient tracking.

ORDERS & PAYMENTS

Attach the correct customer

01 Search an existing customer by name or phone before creating one.

02 For a new phone, choose the country code; India +91 is the default.

03 Confirm the guest’s details, then attach the saved profile.

Use the existing profile for loyalty, purchases and outstanding dues.

ORDERS & PAYMENTS

Send the unsent items to kitchen

01 Review the items, table, options and preparation notes.

02 Choose Send to kitchen, then check the saved ticket and line status.

03 Follow up in Kitchen if the ticket remains unaccepted or not started.

KOT means Kitchen Order Ticket. Sending a KOT does not collect payment.

ORDERS & PAYMENTS

An extra item needs a new KOT round

Already sent

1 × Cappuccino belongs to KOT round 1.

Added later

1 × Croissant stays unsent until the next dispatch.

Send again

KOT round 2 contains the newly dispatched lines.

Do not resend or recreate the original ticket to add one item.

ORDERS & PAYMENTS

Use the right POS bucket

BUCKET	PURPOSE
Cart	The order you are building or editing
Active	Unpaid active bills that still need settlement
Drafts	Saved, unfinished orders; tap Active three times
Go back	Return from Drafts to the active-bill view

ORDERS & PAYMENTS

Use configured discounts only

01 Choose an available saved coupon and check its eligible items.

02 Review combo pricing and any loyalty redemption in the total.

03 Ask an admin to correct a rule that does not match the offer.

There is no free-entry “any percentage” discount for staff.

ORDERS & PAYMENTS

Confirm cash before marking paid

01 The assigned cashier checks the amount due and cash received.

02 Use Exact or enter the received amount; verify the displayed change.

03 Choose Mark paid and wait for confirmation before clearing the transaction.

Cash checkout requires a connection and current drawer responsibility.

ORDERS & PAYMENTS

Verify non-cash receipt before recording payment

01 Check the actual UPI/card receipt or verified online payment state.

02 Choose the correct method for the payment that was received.

03 Mark paid once and check the saved result.

A printed bill or a customer’s screenshot is not proof of collection.

ORDERS & PAYMENTS

Make the split add up to the bill

Training example · ₹500 total

₹200	₹300	₹500
Cash portion	Digital portion	Total collected

The cash portion must be handled by the assigned cashier.

ORDERS & PAYMENTS

Pay Later records a debt, not a payment

01 Attach the guest’s existing Customer profile.

02 Use Later / Save on tab only under the café’s credit procedure.

03 Review and settle outstanding dues against the correct customer.

An unpaid or transferred balance must not be described as collected cash.

ORDERS & PAYMENTS

Print the correct document for the guest

DOCUMENT	WHAT IT PROVES
KOT	What the kitchen should prepare
Customer invoice	Items, taxes and amount due / recorded payment
Paid receipt	The confirmed payment state shown on the record
Corrected invoice	The saved amendment and its adjustment

Reprint the saved bill; do not make another sale to print a copy.

KITCHEN & FLOOR

Advance tickets when the work actually happens

01 → 02 → 03 → 04

Accept

Kitchen has received and checked the KOT.

Preparing

Work on the items has started.

Ready

Preparation is complete.

Delivered

The order has reached the guest / collection point.

KITCHEN & FLOOR

Payment and preparation have different jobs

Payment	**Unpaid → Paid** Cashier verifies and records collection.
Kitchen	**New → Accepted → Preparing → Ready → Delivered** Kitchen and service staff track fulfilment.

A paid meal can still be in Kitchen. That is expected.

KITCHEN & FLOOR

Follow up on unaccepted or unstarted tickets

01 Use Kitchen queue status/mode filters and added-items views.

02 Check the ticket number, KOT round, items and waiting time.

03 Speak to the kitchen before retrying a send or changing a status.

Home highlights kitchen follow-ups; Kitchen history has period filters.

KITCHEN & FLOOR

Use the floor to find the running bill

01 Use the default 3D view or switch to Chart view.

02 Select a table to create or manage its dine-in ticket.

03 Check occupancy, seats and the linked bill before moving service on.

Drag to look around, scroll to zoom, pause/reset the 3D rotation when useful.

KITCHEN & FLOOR

Check both fulfilment and settlement

SITUATION	CORRECT NEXT ACTION
Paid, still cooking	Continue the existing Kitchen ticket
Delivered, still unpaid	Collect against the existing bill
New item after a KOT	Dispatch the new lines on the same ticket
Table still occupied	Review its running bill and service state

CASH & REPORTS

Find the existing order before acting again

01 In Orders, choose Day, Week, Month or Range.

02 Search the ticket, customer, item or amount; filter payment method.

03 Sort the list, open details and use the saved order’s actions.

Non-admin accounts can view only the last seven days of history.

CASH & REPORTS

Use the five Orders views for different checks

VIEW	USE IT FOR
Orders list	Individual tickets and payment details
Overview	Sales, paid orders, unpaid pipeline and trends
Bill Printed	Saved printed-bill evidence
KOT vs Invoice	Kitchen milestones and bill turnaround
Timeline	Chronological operational activity

CASH & REPORTS

Record every drawer movement with its reason

Cash coming in

Opening float, cash sales, cash share of split payments and Add float.

Cash going out

Drop to safe and cash expenses with an accurate description.

Only the responsible cashier records drawer movements and cash expenses.

CASH & REPORTS

Expected cash follows the drawer ledger

Opening float	₹1,000
Cash sales	+ ₹2,400
Added float	+ ₹100
Safe drops	– ₹500
Cash expenses	– ₹200

Expected in drawer

₹2,800

UPI, card and other digital sales do not belong in the physical cash count.

HANDOVER

Prepare before leaving the counter

- [ ] Finish or explain pending payments and guest issues.
- [ ] Sync saved work on every terminal involved.
- [ ] Tell the incoming cashier about open bills, kitchen follow-ups and stock issues.
- [ ] Count the drawer before requesting handover.

HANDOVER

The outgoing cashier requests the handover

01 Choose Hand over and select the incoming cashier.

02 Review expected cash, enter the physical count and explain any difference.

03 Acknowledge the count and request handover.

The outgoing cashier stays responsible until acceptance.

HANDOVER

The incoming cashier accepts using their own login

01 Sign in as yourself and open Home.

02 Choose Review & accept; check the physical count and recorded difference.

03 Acknowledge responsibility and accept. Verify that your name is now the cashier.

One person cannot accept on behalf of the incoming cashier.

HANDOVER

Cash pauses while a handover is waiting

WHAT YOU SEE	WHAT TO DO
Waiting for the incoming cashier	Ask that person to sign in and review
Incoming cashier cannot attend	Outgoing cashier or admin cancels the request
Ledger changed during the review	Cancel, refresh, recount and request again
Cash payment rejected during handover	Complete or cancel the handover first

HANDOVER

A cashier needs an active login and POS access

Missing from the list

Check active staff status, POS access and Staff → Login. The current cashier is excluded.

Outgoing cashier unavailable

An admin can count the drawer and use Take responsibility with a reason.

A roster assignment or a staff profile alone is not a working login.

HANDOVER

Keep the cash difference visible

Training handover example

₹1,500

Expected by the ledger

₹1,480

Physical cash counted

− ₹20

Difference recorded with an explanation

Record the ₹20 shortage. Do not rewrite the float to hide it.

CLOSING

Resolve the day before you close it

- ☐ Review open bills, Pay Later balances and unresolved guest issues.
- ☐ Review unfinished kitchen tickets and tell the team what still needs service.
- ☐ Record actual safe drops, float additions and cash expenses.
- ☐ Sync every terminal, then count the final physical cash.

Unresolved matters need a clear handoff to the person in charge.

CLOSING

Reconcile the cash count and close the day

01 Choose Close day from Home or Setup → Shift.

02 Review expected cash and enter the actual physical count.

03 Explain a difference, acknowledge the review and wait for the confirmed closed status.

The assigned cashier closes; an admin override needs a recorded reason.

CLOSING

X-report is a snapshot; Z-report closes the register

X-report

An interim view of the open register’s sales, cash movements and expected drawer. Printing it leaves the register open.

Z-report

The final closing record includes actual counted cash, expected cash and variance. It is available in Shift reports / archive.

A printer failure does not undo a confirmed close.

CLOSING

Signing out leaves the register as it is

Hand over

Use this when another cashier will continue the same register day.

Close day

Use this after the day’s cash has been reconciled and the register should stop.

Logout only ends your login. It never hands over or closes the drawer.

RECOVERY

If the connection drops, check what was saved

AREA	OPERATING RULE
Cash / open / handover / close	Reconnect; these require confirmation
Cached catalogue and saved work	May remain usable on that device
Order and KOT updates	Can queue locally; check sync before repeating
Printing	Depends on the paired transport / local printer service

Do not clear browser storage or reinstall while saved work is pending.

RECOVERY

Retry the saved operation, not a new sale

01 Open Sync / Recovery and read Pending, To review and print-backup status.

02 Reconnect and use Retry sync for queued work.

03 For a conflict, compare Local and Cloud copies before explicit resolution.

Export a recovery backup before changing devices or resetting the browser.

RECOVERY

Read the error before choosing the next action

MESSAGE / SYMPTOM	CORRECT RESPONSE
Cashier / handover restriction	Review register responsibility on Home
Cash ledger changed	Refresh review and recount
Saved record changed	Keep your draft; reload and compare saved details
Payment or order response uncertain	Find the saved operation in Recovery
Printer did not produce paper	Check saved state, transport and paper; reprint

STOCKS & MENU

Track sellable products and raw ingredients separately

Purchased products

Cakes, pastries or other finished goods are bought outright and counted in sellable pieces / slices.

Raw materials

Coffee, matcha, milk and other ingredients are tracked in saved units through mapped recipes.

Menu defines what is sold. Stocks records what is physically available.

STOCKS & MENU

Check stock before it becomes a guest problem

01 Review Stocks → Overview, Products and Raw materials.

02 Use on-hand, reserved, available and low-stock figures correctly.

03 Report sold-out products and record authorized physical adjustments.

Raw shortages warn and log; finished goods still enforce available stock.

STOCKS & MENU · MANAGER / ADMIN REFERENCE

Receive supplier deliveries with a clear record

01 Authorized operators record the supplier, invoice and delivery date.

02 Enter pack quantities, sellable yield or base-unit conversion accurately.

03 Record batch / expiry where relevant and check the resulting balance.

Supplier setup, receiving and purchase costs are admin-controlled.

Recipe edits apply to future submissions

Training recipe example

Version 1

30 g coffee per serving

Version 2

60 g coffee per serving

Existing KOT

Keeps its captured recipe version

Configure shot, size and milk options in Recipes; never change units casually.

STOCKS & MENU

Kitchen stages drive recipe use

01

Cart / draft

No ingredient reservation or deduction.

02

Send / accept

Reserve mapped quantities; keep them reserved when accepted.

03

Prepare

Consume the outstanding reservation once.

04

Cancel / waste

Release before preparation; record waste after preparation.

STOCKS & MENU

Use counts, adjustments and logs for reconciliation

01 Count / adjust records a physical count, waste, extra usage or an authorized return.

02 Choose the correct saved unit and enter a meaningful reason; link a ticket when relevant.

03 Review Stock logs and Reports by period; load all pages before exporting totals.

Count CSV: export, edit quantities, import, review, then apply.

Menu owns products, categories and combos

MENU AREA	WHAT IS MANAGED
Products	Names, descriptions, prices, images and availability
Product options	Size, milk, shots, add-ons, notes and selection rules
Categories	Grouping, display details and default tracking rules
Combos	Configured bundled items and their deal pricing

Product, category and combo editors have their own URLs.

PEOPLE & STAFF

Use one customer profile across service

PEOPLE AREA	WHAT STAFF CAN REVIEW
Directory	Search, sortable columns and customer details
Activity / Purchases	The guest’s recorded activity and orders
Points log	Earned, redeemed and adjusted points
Notes & preferences	Service preferences and internal staff notes
Events	The profile’s event participation

PEOPLE & STAFF

Apply loyalty through the saved customer record

01 Attach the guest before redeeming available points.

02 Check configured limits and the final payable total.

03 Use the Points log to investigate changes; explain authorized adjustments.

Credits, redemptions, visits and purchases must remain attached to the correct person.

PEOPLE & STAFF

Keep your own staff profile current

01 In Staff, update your phone, birthday, bio and profile photo.

02 Check your employment type and standard hours.

03 Keep login credentials private and ask an admin about account access.

Full time: 8 hours. Part time: 6 hours as the standard shift mapping.

PEOPLE & STAFF

Use the weekly roster for planned shifts

01 Staff review their scheduled days and shift times.

02 Admins assign 8-hour / 6-hour shifts and can select multiple days.

03 Admins can repeat a week and import/export roster CSV for editing.

A roster entry does not open the cash register or assign its cashier.

PEOPLE & STAFF

Complete tasks after the work is done

01 Check today’s assigned checklist on Home or Staff → Daily tasks.

02 Read the task details and due date.

03 Mark done only after completing the physical work; reopen if necessary.

Admins assign the tasks. Staff update their own assigned work.

PEOPLE & STAFF

A leave request is not approval

01 Submit the correct dates, leave type and reason in Staff → Leave.

02 Wait for an admin’s Approved or Rejected decision.

03 Coordinate roster coverage and any register handover separately.

Only admins review leave. Staff can cancel their own eligible requests.

PEOPLE & STAFF

Find your payslips and joining letter in Staff

Employee view

View your employment details, published salary slips and joining letter; export your payslip as PDF.

Admin workflow

Enter salary, allowances, bonus/overtime and deductions; save a draft or publish the slip. Attach the joining letter PDF.

Salary and documents are private to that employee and admins.

EVENTS & SETUP · AUTHORIZED EVENT OPERATORS

Manage café events through the shared CRM

FEATURE	WHAT HAPPENS
Events / Categories	Create and organize café initiatives
Published event	Appears in upcoming public event listings
RSVP	Belongs to an existing registered People profile
Attendance	Review guests, check in / undo check-in, cancel RSVP

Current event participation uses free RSVPs with capacity checks.

EVENTS & SETUP

Use the Setup areas your role allows

AREA	EVERYDAY PURPOSE
Shift	Open register, handover, close day, reports and Activity
Devices	Inspect connected terminal / device information
Printer	Choose USB, Bluetooth or System and test output
Recovery	Review queues, retry sync and export a backup

Access, Master and other admin configuration stay restricted.

EVENTS & SETUP

Check the printer, not just the status label

01 Choose USB, Bluetooth or System and the intended printer / pairing.

02 Check paper width: 58 mm or 80 mm, matching the printer.

03 Check power and paper, rescan if needed, then print an authorized test receipt.

“Queue available” does not mean the physical printer is online or paired.

EVENTS & SETUP · ADMIN REFERENCE

Admin settings define the business rules

SETUP TAB	CONFIGURATION
Access	Role permissions and a route to staff management
Master	GST / company / FSSAI / invoice details and cart limits
Discount	Saved coupon rules, scope and enabled state
Store	Schedule, opening override, checkout availability and order alerts

EVENTS & SETUP · ADMIN REFERENCE

API, Emails and Messaging have different purposes

SETUP TAB	USE IT FOR
API	Inspect the available service / integration reference
Emails	Preview notification templates and copy/download their HTML
Messaging	Check email / WhatsApp connection status and send an authorized test

Provider secrets belong in the backend environment, not a staff form.

Use music and announcements deliberately

Music & devices

Manage configured playback and inspect the intended output device. Provider setup and permissions affect availability.

Announcements

Edit saved operational alerts / promo rotation, select a supported English/Hindi voice and test volume before use.

Playing a sample alert is a real audible action. Coordinate with the floor.

Bill previews cover seven print layouts

GROUP	LAYOUTS
Customer	Invoice · online payment receipt · corrected invoice
Kitchen	Compact kitchen ticket / KOT
Register	Interim X-report · closing Z-report
Device	Printer test receipt

Preview at 58 mm or 80 mm; sample data is not a real transaction.

STAFF PRACTICE

Choose the next action

1. A guest paid, but the drink is still cooking.
2. Your cash count is ₹20 below expected at handover.
3. The incoming cashier is absent from the list.
4. Payment was submitted, then the connection dropped.
5. You sign out while the register is still open.

STAFF PRACTICE

The correct actions preserve the record

1. Continue the existing Kitchen ticket; do not create another sale.
2. Record the actual count and shortage note; incoming cashier verifies it.
3. Ask an admin to check active status, POS access and Staff → Login.
4. Review the saved transaction / Recovery before collecting or submitting again.
5. Responsibility remains yours until accepted handover or confirmed close.

STAFF PRACTICE

The daily staff checklist

- ☐ Start: own login, roster/tasks, sync, stock/printer check, counted opening.
- ☐ Service: correct customer/order, clear KOTs, verified payment, honest cash records.
- ☐ Handover: synced terminals, counted drawer, explained difference, incoming acceptance.
- ☐ Finish: unresolved matters escalated, final count, reconciled close, saved report.

Use the included one-page checklist at the counter.

STAFF PRACTICE

Open → Use system
Hand over → Close day

Know who owns the drawer.
Count what is there. Keep every action traceable.
